1. Are all the decisions done to implement the Baltic Sea Chart Datum 2000?

1.1. When the decisions has been done or planned to be done?
A written decision was issued by HOPN in July 2021 - Guidelines and timetable for the implementation of PL-EVRF2007-NH (BCD2000).

1.2. What are the national decisive organizations?
➢ Head Office of Geodesy and Cartography (Główny Urząd Geodezji i Kartografii)
➢ Hydrographic Office of the Polish Navy (Biuro Hydrograficzne Marynarki Wojennej)

2. What is the national status of implementation of chart datum?

2.1. What actions have already been done?
➢ corrections have been established between the local vertical datum (Amsterdam NN55) and the EVRF for costal water stations,
➢ bathymetric measurements collected in the bathymetric database were transferred to the vertical reference system PL-EVFR2007-NH,
➢ in 2021, gravimetric measurements in Polish waters were completed,

2.2. What actions have been planned to be executed and what is the schedule?
➢ September 2021 - information campaign about a new chart datum,
➢ 2021 – 2023 new editions of all INT harbour, approach and coastal charts,

2.3 Which ENC Approach have been updated with the new reference datum? If possible, attach a chart datum overview covering Your countries nautical charts, designed graphically or as a table, updated around January, 2021. Also, if possible, include an attribute to each named chart describing the CD difference to BSCD2000 in cm (CD minus BSCD2000). Example attached at the end of the Questionnaire (Annex).
No one – so far.

2.4 If you implemented the attribute VERDAT in S-57 (ENC), are You using VERDAT=3 (Mean Sea Level)?
VERDAT=3 is used in all PL ENCs.
3. **Has Your country established the national realization of EVRS and are the water level stations connected to this new height system (BSCD2000)?**

3.1 Which organization/-s is responsible for the water level stations/data in Your country?  
   Institute of Meteorology and Water Management (Instytut Meteorologii i Gospodarki Wodnej)

3.2 Which reference are used today to present water level information?  
   Does Your country planning to present water level information referring to BSCD2000? Doing it already today? Date decided for change the reference to BSCD2000?  
   Readings from coastal water stations are presented in the local vertical reference system Amsterdam NN55.

3.3 Are there any plans for digital service/-s intended for the users to have the option to choose MSL or BSCD2000 as the reference level for water level information?  
   N/N

3.4 GNSS supported UKC control/confirmation is probably the reality in a few years. We also need reliable water level predictions for carrying out optimal loading and real time water level data to check the GNSS data. Do we need a shared service in the Baltic Sea for water level information (predictions/real-time), which fulfils nautical needs and demands?  
   Online, shared service would be very helpful/necessary after BSCD2000 implementation in all Baltic waters.

3.5 Do we need to work together with the development of the IHO S-104 standard?  
   It is not necessary.

4. **Are the relevant national contacts and interest groups defined for the change of chart datum and water level reference?**

4.1 What are the essential national interest groups in Your country?  
   Maritime Offices (Gdynia, Szczecin), Harbour Masters.

4.2 Are the relevant point of contacts known and contacts been made to them?  
   Yes.

4.3 Are You planning any information campaign about the change of chart datum and water level reference? If, yes have you published information about this somewhere?  
   Information about the new chart datum is planned to be published in all September’s (2021) Notice to Mariners issued by HOPN.

5. **Have You identified any obstacles or major issues concerning transition to the harmonized vertical reference?**

5.1. What are the major obstacles or issues?  
   Currently, the only issue is the time necessary for preparation a new edition of the nautical chart (with a new chart datum).
5.2. What measures has been planned to avoid them? 
Maintaining the time limits of the approved plan.

6. Connections to neighbouring countries.

6.1. Which are the relevant countries to cooperate? 
No cooperation in that matter.

6.2. Are the needed points of contacts already known? 
Not required.

6.3. What actions have been agreed with the relevant countries (e.g. synchronising plans and schedules)? 
No actions.

7. Are there any needs for support from BSHC? 
Not required.

8. Do you have any other proposals or guidance to the CDWG to help and foster the transition process? 
No.

9. Are you using GNSS and GNSS augmentation services for referring to your (bathymetric) surveys to the chart datum?

9.1 What GNSS augmentation service is used for hydrographic surveys? (If there are several augmentation services, list all of them.)
Examples of GNSS services available on the Polish coast:
- GPS RTK (Gulf of Gdańsk - local FM radio),
- ASG-EUPS (GPS RTK),
- SmartNet Poland (GPS RTK),
- TPI Net pro (GPS RTK),
- VRSnet (GPS RTK).

9.2 To which coordinate system, and vertical reference level/Frame the GNSS augmentation service is referred to? (If there are several systems in use, list all of them.)
ETRS-89 (GRS-80h),
PL-EVRF2007-NH.

9.3 Does your HO require, in-house or procured, that Hydrographic survey system shall be prepared to be able to measuring the GNSS-height and refer the depth to the geoid? 
Under current regulations, it is not required.

9.4 Do you discuss within your HO the need of an altimetric measured Mean Sea Surface (MSS)? (For example, in order to support hydrodynamic models, shipping and / or adjust existing depth data)?
This topic is not discussed.

9.5 Has your HO assessed the need for dynamic geodetic reference systems (time-dependent transformation relationship) between primarily national and global reference frames? 
This matter is not considered.
Annex
Currently, all PL nautical charts are referred to Amsterdam NN55. New editions of harbour, approach and coastal charts are to be issued in PL-EVRF2007-NH (BSCD2000) reference system. Pictures below presents the implementation schedule of the new reference system to the nautical charts (harbour and approach band).
