Baltic Sea Chart Datum 2000 – a common reference level for nautical charts and sea level information in the Baltic Sea

2019-03-12 NKG-meeting, Lyngby

Thomas Hammarklint

Thomas.Hammarklint@sjofartsverket.se
The Baltic Sea Hydrographic Commission, which is an integral part of the International Hydrographic Organisation (IHO), promotes the technical co-operation in the domain of hydrographic surveying, marine cartography and nautical information among the neighboring countries of the Baltic Sea region.

The main objectives of the Commission are the coordination of the production of the Baltic Sea INT Charts, the coordination of hydrographic re-surveys, harmonization of chart datums, harmonization of Baltic Sea ENC's, and the exchange of information and the harmonization of practices with regard to various issues related to hydrography.

The most recent development is the Baltic Sea Bathymetric Database — accessible via this portal.

International Hydrographic Organization

The International Hydrographic Organization is an intergovernmental consultative and technical organization that was established in 1921 to support safety of navigation and the protection of the marine environment.

The object of the Organization is to bring about:
- The coordination of the activities of national hydrographic offices
- The greatest possible uniformity in nautical charts and documents
- The adoption of reliable and efficient methods of carrying out and exploiting hydrographic surveys
- The development of the sciences in the field of hydrography and the techniques employed in descriptive oceanography
The CDWG will have its next meeting (CDWG12) 3-4 March 2020 in Gdansk, Poland

Baltic Sea Chart Datum 2000 (BSCD2000)

- **Justification:**
The Baltic Sea is an international shallow, non-tidal area in the northern part of Europe with dense traffic. IHO BSHC has approved the name and the adoption of the Baltic Sea Chart Datum 2000.

- **Definition:**
The datum refers to each Baltic country’s realization of the European Vertical Reference System (EVRS) with land-uplift epoch 2000, which is connected to the Normaal Amsterdams Peil (NAP).

- **Height systems used as national realization of BSCD2000 (EVRS-based):**
  - Sweden: RH2000
  - Germany: DHHN2016?
  - Lithuania: LAS07
  - Estonia: EH2000
  - Denmark: DVR90
  - Poland: PL-EVRF2007-NH
  - Latvia: LAS2000,5
  - Finland: N2000

- **Chart datum name to be shown in paper charts:**
  - Mean Sea Level (Baltic Sea Chart Datum 2000\textsuperscript{national realization name})
  - or
  - Mean Sea Level (Baltic Sea Chart Datum 2000)
BSCD2000 is now included in IHO Geospatial Information (GI) Registry, as chart datum number 44:

**FCD Register**

- Item Type: Enumerated
- Domain: IHO Hydro
- EnumeratedValueCode: BSCD2000
- EnumeratedValueCodeID: 44
- Alias: Unexpected
- Concept: Baltic Sea Chart Datum 2000
- Expression: BSCD2000 - The datum refers to each Baltic country's Realization of the European Vertical Reference System (EVRS) with respect to the 1998 ellipsoid (WGS84). It is connected to the horizontal astronomical position of the FCE (E-N)
- Reference: Baltic Sea Hydrographic Commission
- Definition Source: Unexpected
- Similarity to Source: Unexpected

Fig. 4b: Differences between the reference levels of the old national chart datums with respect to BSCD2000. In Sweden, Finland and Norway, the old reference levels are equal to Mean Sea Level transferred to year 2019 (according to different national conventions). In Estonia, Latvia, Lithuania and Poland, the Kronstadt reference level is used as old chart datum. Notice how postglacial rebound reduces the magnitude of the mean sea level in the Bay of Bothnia; it is now just a few cm near the land uplift maximum.
Reference datums in Skagerack

- Norwegian chart datum (LAT-20) ca 50-60 cm below BSCD2000

- Danish LAT ca 20 cm below BSCD2000
Sweden will change reference datum

Swedish Maritime Administration (SMA) and Swedish Meteorological and Hydrological Institute (SMHI) will present sea level data relative BSCD2000 from 3rd June 2019
An ongoing transition to BSCD2000 (RH 2000) at SMHI -> forecasts, warnings and information about current sea level will be issued in BSCD2000

Warning levels have been adjusted from MSL to BSCD2000

2019-06-03: Warnings for high and low sea level will be issued in BSCD2000
