

CDWCWG Harmonisation Sub-group 6th meeting 2026-06-16

Participants

Mononen Jyrki (Traficom)
Andris Viksna (Met-office Latvia)
Edgaras Lukšys (LTSA)
Guillaume Vigouroux (SMHI)
Jacob Woge Nielsen (DMI)
Jokiniemi Anni (FMI)
Jürgen Holfort Germany (BSH)
Kristian Villadsen Kristmar (DGA)
Mindaugas Zakarauskas (LTSA)
Ramutė Bataitienė (Met-office Lithuania)
Thomas Hammarklint (SMA)

Notes 16.6.2026

- Check and add missing abbreviations and terms to the chapter *Terms, definitions and abbreviations* (e.g. BOOS is missing)
- Roadmap is not updated yearly but every five years -> Agreed that will be presented in the harmonization document, because doesn't need regular update
- Chapter *Status of implementation*: Agreed to remove mention of S-105, because there is not yet any decision concerning it to be done
- Asked if participants deems important to have observations included in product specification, e.g. S-10X -> many agreed -> it will be brought out in IHO/TWCWG -meetings
- Check and harmonize the terminology: speed and direction - velocity - current - current speed (agreed to use speed and direction instead of velocity and direction to be consistent with S-111) -
- Discussed of the maximum file-size: => agreed to follow what is said in the product specification
- *Recommendation 2: Vertical reference system for S-111* -> discussed how it should be written, not yet agreed a new formulation (Thomas will write a proposal for better formulation)
- *Recommendation 4 Resolution*:
 - to be reformulated to be more like recommendation in the next version of the harmonization document
 - Discussed should we need to add vertical and time resolution -> deemed to be feasible to have them as well (maybe in some later version of the harmonization document)
 - Agreed to change the headline from "Resolution" to "Horizontal resolution". Then it is more clear that it refers to horizontal resolution.
- *Recommendation 7 Data updating*:
 - Clarified what this means: how often the data/model will be updated and uploaded for the users
 - Agreed that recommendation should be reformulated:

- Ask from Baltic Sea countries how often they update the data/model and how often they upload the product => after that formulate the recommendation
- Thomas will rewrite the recommendation in a way that updating will be harmonized in the BS area.
- RENC shall be removed
- Discussed should we have a recommendation also for the product scheming
- *Recommendation 10 Technical validation and signing of data:* discussed should the RENC be taken away from the recommendation because the product can be signed and disseminated by the producer (at least in some cases)
- *Recommendation 12 File naming: ...any dates or timestamps AND any other changing parts*
