

19.12.2025

Invitation: S-104 & S-111 in the Baltic Sea -Workshop

Welcome to the S-104 & S-111 in the Baltic Sea Workshop in Riga, Latvia or online!

The workshop is hosted by Finnish Meteorological Institute as part of the Baltic Sea e-Nav -project. The workshop will be in Riga Latvia after the CDWCWG-meeting. Nevertheless it's not only for CDWCWG members, but for all interested in producing sea level and current services in the Baltic Sea. The workshop is also online for those who can't come to Riga.

Background

S-104 (sea level) and S-111 (currents) are IHO's new standards for presenting sea level and current data on ECDIS system on board the ships. S-104 and S-111 products are allowed from the beginning of 2026. This is a new challenge to the producers of sea level and current data, like meteorological offices etc., to provide their data in this new format.

Finnish Meteorological Institute has been working to create S-104 and S-111 products from the Finnish sea areas as a part of e-Nav-project. In the workshop we want to share the knowledge and discuss the development of these products in different countries in our common Baltic Sea area.

Where, when, who

- When: **Thursday 26.3.2026, time 9-14**
- Where: **Riga, Latvia or online**
- To Whom: Potential S-104 and S-111 producers, sea level and current experts and all interested in producing S-104 or S-111 products in the Baltic Sea.

Registration by e-mail

Send e-mail to anni.jokiniemi@fmi.fi and tell the following information

- name and e-mail
- organization and title
- will you participate in Riga or online

More information will be sent in the beginning of 2026. I'm happy to answer any questions you have.

Welcome

Anni Jokiniemi
